Have You Made Any of These Financial Mistakes?

As people move through different stages of life, there are new financial opportunities — and potential pitfalls — around every corner. Have you made any of these mistakes?

Your 50s and 60s

1. *Raiding your home equity or retirement funds.* It goes without saying that doing so will prolong your debt and/or reduce your nest egg.

2. *Not quantifying your expected retirement income.* As you near retirement, you should know how much money you (and your spouse, if applicable) can expect from three sources:

- Your retirement accounts such as 401(k) plans, 403(b) plans, and IRAs
- Pension income from your employer, if any
- Social Security (at age 62, at your full retirement age, and at age 70)

3. *Co-signing loans for adult children.*

Co-signing means you're 100% on the hook if your child can't pay, a less-than-ideal situation as you're getting ready to retire.

4. *Living an unhealthy lifestyle.* Take steps now to improve your diet and fitness level. Not only will you feel better today, but you may reduce your health-care costs in the future.

Your 40s

1. *Trying to keep up with the Joneses.*

Appearances can be deceptive. The nice lifestyle your friends, neighbors, or colleagues enjoy might look nice on the outside, but behind the scenes there may be a lot of debt supporting that lifestyle. Don't spend money you don't have trying to keep up with others.

2. *Funding college over retirement.* In your 40s, saving for your children's college costs at the expense of your own retirement may be a mistake. If you have limited funds, consider setting aside a portion for college while earmarking the majority for retirement. Then sit down with your teenager and have a frank discussion about college options that won't break the bank — for either of you.

3. *Not having a will or an advance medical*

directive. No one likes to think about death or catastrophic injury, but these documents can help your loved ones immensely if something unexpected should happen to you.

Your 30s

1. *Being house poor.* Whether you're buying your first home or trading up, think twice about buying a house you can't afford, even if the bank says you can. Build in some wiggle room for a possible dip in household income that could result from leaving the workforce to raise a family or a job change or layoff.

2. *Not saving for retirement.* Maybe your 20s passed you by in a bit of a blur and retirement wasn't even on your radar. But now that you're in your 30s, it's essential to start saving for retirement. Start now, and you still have 30 years or more to save. Wait much longer, and it can be very hard to catch up.

3. *Not protecting yourself with life and disability insurance.* Life is unpredictable. Consider what would happen if one day you were unable to work and earn a paycheck. Life and disability insurance can help protect you and your family. Though the cost and availability of life insurance will depend on several factors including your health, generally the younger you are when you buy life insurance, the lower your premiums will be.

Your 20s

1. *Living beyond your means.* It's tempting to splurge on gadgets, entertainment, and travel, but if you can't pay for most of your wants up front, then you need to rein in your lifestyle, especially if you have student loans to repay.

2. *Not paying yourself first.* Save a portion of every paycheck first and then spend what's left over, not the other way around. And why not start saving for retirement, too? Earmark a portion of your annual pay now for retirement and your 67-year-old self will thank you.

3. *Being financially illiterate.* Learn as much as you can about saving, budgeting, and investing now and you could benefit from it for the rest of your life.

The Financial Implications of a Chronic Illness

There's no such thing as a one-size-fits-all financial plan for someone with a chronic illness. Every condition is different, so your plan must be tailored to your needs and challenges, and reviewed periodically.

All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.

The cost and availability of life insurance depend on factors such as age, health, and the type and amount of insurance purchased.

When you live with a chronic illness, you need to confront both the day-to-day and long-term financial implications of that illness. Talking openly about your health can be hard, but sharing your questions and challenges with those who can help you is extremely important, because recommendations can be better tailored to your needs. Every person with a chronic illness has unique issues, but here's a look at some topics you might need help with.

Money management

A budget is a useful tool for anyone, but it's especially valuable when you have a chronic illness, because it will serve as a foundation when planning for the future. Both your income and expenses may change if you're unable to work or your medical costs rise, and you may need to account for unique expenses related to your condition. Clearly seeing your overall financial picture can help you feel more in control.

Keeping good records is also important. For example, you may want to set up a system to help you track medical expenses and insurance claims. You may also want to prepare a list of instructions for others, such as a trusted friend or relative, that includes where to find important household and financial information in an emergency.

Another step you might want to take is simplifying your finances. For example, if you have numerous financial accounts, you could consolidate them to make it easier and quicker for you or a trusted advisor to manage. Setting up automatic bill payments or online banking can also help you keep your budget on track and ensure that you pay all bills on time.

Insurance

Reviewing your insurance coverage is essential. Read your health insurance policy and make sure you understand your copayments, deductibles, and the nuts and bolts of your coverage. In addition, find out if you have any disability coverage, and what terms and conditions apply.

You might assume that you can't purchase additional life insurance, but this isn't necessarily the case. It may depend on your condition or the type of life insurance you're seeking. Some policies will not require a medical exam or will offer guaranteed coverage. If you already have life insurance, find out if your policy includes accelerated (living) benefits. You'll also want to review beneficiary designations. If you're married, make sure that your spouse has adequate insurance coverage, too.

Investing

Having a chronic illness can affect your investment strategy. Your income, cash-flow requirements, and tolerance for risk may change, and your investment plan may need to be adjusted to account for both your short-term and long-term needs. You may need to keep more funds in a liquid account now (for example, to help meet day-to-day living expenses or use for home modifications, if necessary), and you'll want to thoroughly evaluate your long-term needs before making investment decisions. The course of your illness may be unpredictable, so your investment plan should remain flexible and be reviewed periodically.

Estate planning

You might think of estate planning only as something you do to get your affairs in order in the event of death, but estate planning tools can also help you manage your finances right now.

For example, a durable power of attorney can help protect your property in the event you become unable to handle financial matters. A durable power of attorney allows you to authorize someone else to act on your behalf, so he or she can do things like pay everyday expenses, collect benefits, watch over your investments, and file taxes.

A living trust (also known as a revocable or inter vivos trust) is a separate legal entity you create to own property, such as your home or investments. The trust is called a living trust because it's meant to function while you're alive. You control the property in the trust and, whenever you wish, can change the trust terms, transfer property in and out of the trust, or end the trust altogether. You name a co-trustee such as a financial institution or a loved one who can manage the assets if you're unable to do so. There are costs and ongoing expenses associated with the creation and maintenance of trusts.

You may want to have advance medical directives in place to let others know what medical treatment you would want, or that allow someone to make medical decisions for you, in the event you can't express your wishes yourself. Depending on what's allowed by your state, these directives may include a living will, a durable power of attorney for health care, and a Do Not Resuscitate order.

Review your plan regularly

As your health changes, your needs will change too. Make sure to regularly review and update your financial plan.

No investment strategy can guarantee success. All investing involves risk, including the possible loss of your contribution dollars.

There is no assurance that working with a financial professional will result in investment success.

On the Road to Retirement, Beware of These Five Risks

On your journey to retirement, you'll likely face many risks that have the potential to throw you off course. Following are five common challenges retirement investors face. Take some time now to review and understand them before your journey takes an unplanned detour.

1. Traveling aimlessly

Setting out on an adventure without a definitive destination can be exciting, but probably not when it comes to saving for retirement. As you begin your retirement strategy, one of the first steps you'll need to take is identifying a goal. While some people prefer to establish one big lump-sum accumulation amount — for example, \$1 million or more — others find that type of number daunting. They might focus on how much their savings will need to generate each month during retirement — say, the equivalent of \$5,000 in today's dollars, for example. ("In today's dollars" refers to the fact that inflation will likely increase your future income needs. These examples are for illustrative purposes only. They are not meant as investment advice.)

Regardless of the approach you follow, setting a goal may help you better focus your investment strategy. In order to set a realistic target, you'll need to consider a number of factors — your desired lifestyle, pre-retirement income, health, Social Security benefits, any traditional pension benefits you or your spouse may be entitled to, and others. Examining your personal situation both now and in the future can help you determine how much you may need to accumulate.

2. Investing too conservatively...

Another key to determining how much you may need to save on a regular basis is targeting an appropriate rate of return, or how much your contribution dollars may earn on an ongoing basis. Afraid of losing money, some retirement investors choose only the most conservative investments, hoping to preserve their hard-earned assets. However, investing too conservatively can be risky, too. If your investment dollars do not earn enough, you may end up with a far different retirement lifestyle than you had originally planned.

3. ...Or too aggressively

On the other hand, retirement investors striving for the highest possible returns might select investments that are too risky for their overall situations. Although you might consider investing at least some of your retirement portfolio in more aggressive investments to potentially outpace inflation, the amount you invest in such higher-risk vehicles should be

based on a number of factors. Appropriate investments for your retirement savings mix are those that take into consideration your total savings goal, your time horizon (or how much time you have until retirement), and your ability to withstand changes in your account's value. Would you be able to sleep at night if your portfolio lost 10%, 15%, even 20% of its overall value over a short time period? These are the types of scenarios you must consider when choosing an investment mix.

4. Giving in to temptation

On the road to retirement, you will likely face many financial challenges as well — the unplanned need for a new car, an unexpected home repair, an unforeseen medical expense are just some examples.

During these trying times, your retirement savings may loom as a potential source of emergency funding. But think twice before tapping your retirement savings assets, particularly if your money is in an employer-sponsored retirement plan or an IRA. Consider that:

- Any dollars you remove from your portfolio will no longer be working for your future
- You may have to pay regular income taxes on distribution amounts that represent tax-deferred investment dollars and earnings
- If you're under age 59½, you may have to pay an additional penalty tax of 10% to 25% (depending on the type of plan and other factors; some exceptions apply)

For these reasons, it's best to carefully consider all of your options before using money earmarked for retirement.

5. Prioritizing college saving over retirement

Many well-meaning parents may feel that saving for their children's college education should be a higher priority than saving for their own retirement. "We can continue working, if needed," or "our home will fund our retirement," they may think. However, these can be very risky trains of thought. While no parent wants his or her children to take on a heavy debt burden to pay for education, loans are a common and realistic college-funding option — not so for retirement. If saving for both college and retirement seems impossible, consider speaking with a financial professional who can help you explore the variety of tools and options.

What is the difference between a tax deduction and a tax credit?

Tax deductions and credits are terms often used together when talking about taxes.

While you probably know that they can lower your tax liability, you might wonder about the difference between the two.

A tax deduction reduces your taxable income, so when you calculate your tax liability, you're doing so against a lower amount. Essentially, your tax obligation is reduced by an amount equal to your deductions multiplied by your marginal tax rate. For example, if you're in the 22% tax bracket and have \$1,000 in tax deductions, your tax liability will be reduced by \$220 ($\$1,000 \times 0.22 = \220). The reduction would be even greater if you are in a higher tax bracket.

A tax credit, on the other hand, is a dollar-for-dollar reduction of your tax liability. Generally, after you've calculated your federal taxable income and determined how much tax you owe, you subtract the amount of any tax credit for which you are eligible from your tax obligation. For example, a \$500 tax credit will reduce your tax liability by \$500, regardless of your tax bracket.

The Tax Cuts and Jobs Act, signed into law late last year, made significant changes to the individual tax landscape, including changes to several tax deductions and credits.

The legislation roughly doubled existing standard deduction amounts and repealed the deduction for personal exemptions. The higher standard deduction amounts will generally mean that fewer taxpayers will itemize deductions going forward.

The law also made changes to a number of other deductions, such as those for state and local property taxes, home mortgage interest, medical expenses, and charitable contributions.

As for tax credits, the law doubled the child tax credit from \$1,000 to \$2,000 for each qualifying child under the age of 17. In addition, it created a new \$500 nonrefundable credit available for qualifying dependents who are not qualifying children under age 17. The tax law provisions expire after 2025.

For more information on the various tax deductions and credits that are available to you, visit [irs.gov](https://www.irs.gov).

What are the gift and estate tax rules after tax reform?

The Tax Cuts and Jobs Act, signed into law in December 2017, approximately doubled the federal gift and estate tax basic exclusion amount to

\$11.18 million in 2018 (adjusted for inflation in later years). After 2025, the exclusion is scheduled to revert to its pre-2018 level and be cut approximately in half. Otherwise, federal gift and estate taxes remain the same.

Gift tax. Gifts you make during your lifetime may be subject to federal gift tax. Not all gifts are subject to the tax, however. You can make annual tax-free gifts of up to \$15,000 per recipient. Married couples can effectively make annual tax-free gifts of up to \$30,000 per recipient. You can also make unlimited tax-free gifts for qualifying expenses paid directly to educational or medical service providers. And you can make deductible transfers to your spouse and to charity. There is a basic exclusion amount that protects a total of up to \$11.18 million (in 2018) from gift tax and estate tax. Transfers in excess of the basic exclusion amount are generally taxed at 40%.

Estate tax. Property you own at death is subject to federal estate tax. As with the gift tax, you can make deductible transfers to your spouse and to charity; there is a basic exclusion amount that protects up to \$11.18 million (in 2018) from tax, and a tax rate of 40% generally applies to transfers in excess of the basic exclusion amount.

Portability. The estate of a deceased spouse can elect to transfer any unused applicable exclusion amount to his or her surviving spouse (a concept referred to as portability). The surviving spouse can use the unused exclusion of the deceased spouse, along with the surviving spouse's own basic exclusion amount, for federal gift and estate tax purposes. For example, if a spouse died in 2011 and the estate elected to transfer \$5 million of the unused exclusion to the surviving spouse, the surviving spouse effectively has an applicable exclusion amount of \$16.18 million (\$5 million plus \$11.18 million) to shelter transfers from federal gift or estate tax in 2018.
